

Disaster risk recognition and mitigation are incorporated in our [Quezon City's Comprehensive Land Use Plan \(CLUP\) 2011 to 2025](#) which was finally approved by the Housing and Land Use Regulatory Board or HLURB last September 14, 2017, after having gone through extensive evaluations and deliberations.

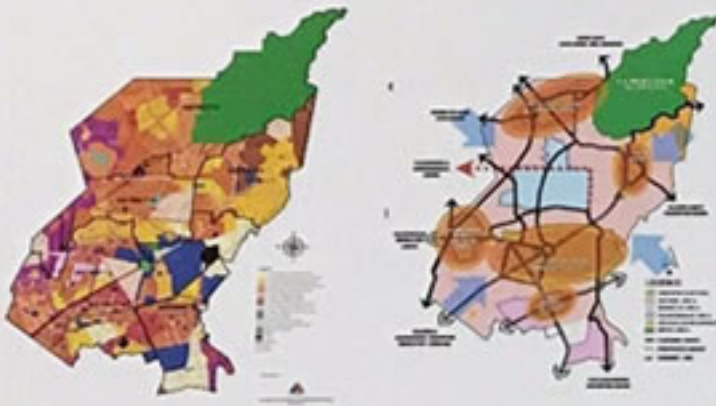

The CLUP is the long-term framework plan that defines the desired pattern of growth of the city. The revised CLUP was first adopted through Ordinance No. SP-2069, s. 2011, in an effort to update zoning laws to consider the significant transformations that have been taking place in terms of the patterns, intensity and direction of development.

The enactment of Republic Act 9729, or the Climate Change Adaptation Act, and Republic Act No. 10121, or the Disaster Risk Reduction Management Act, required technical revisions in the original CLUP, as it went through the technical evaluations of the HLURB and the Metro Manila Development Authority. The amendments were institutionalized through the implementing ordinances, Ordinance No. SP-2488, s. 2016 and the Comprehensive Zoning Ordinance of 2016.

The approval paves the way for putting in motion the city's updated Zoning Ordinance for all locational clearance applications.
